Sequence 16, Application US/09248796A

Sequence 16, Application US/09248796A

Patent No. 6747137

GENERAL INFORMATION:
TITLE OF INVENTION: WOLGETC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICATION UNDERST. US/09/248,796A

TITLE OF INVENTION: POR DIAGNOSTICS AND THERAPEUTICS
FILE REPERRICE: 107196.132

CURRENT APPLICATION NUMBER: US/09/248,796A

CURRENT APPLICATION NUMBER: US 60/074,725

PRIOR FILING DATE: 1998-02-13

PRIOR FILING DATE: 1998-08-13

NUMBER OF SEQ ID NOS: 28208

SEQ ID NO 16

TOWNELLY OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE NOTION OF THE N

New monoclonal antibody against Candida albicans agglutinin-like sequence I adhesin proteins, for use as a vaccine to treat or prevent disseminated candidiasis, or to generate an immune response that blocks adherence of the organism. Monoclonal antibody; agglutinin-like sequence; ALS; gene therapy; candidiasis; vaccine; fungicide. Candida albicans agglutinin-like sequence (ALS) 1 protein. χ; 몺 Sheppard DC, Ibrahim A, (HARB-) HARBOR-UCLA RES & EDUCATION INST ABW01168 standard; protein; 1260 AA 19-NOV-1999; 99US-0166663P. 18-NOV-2000; 2000US-00715876. 13-SEP-2002; 2002US-00245802. The present invention relates to a monoclonal antibody against an agglutinin-like sequence (ALS)1 protein that specifically binds an application an N-terminal domain and which inhibits adherence of Candida albicans to endothelial cells. The invention is useful as vaccines for treating and preventing disseminated candidiasis and for generating an immune response capable of blocking adherence of the organism. The invention is also useful in gene therapy. The present sequence is Candida albicans agglutinin-like sequence (ALS) protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   18;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New monoclonal antibody against Candida albicans agglutinin-like sequence I adhesin proteins, for use as a vaccine to treat or prevent disseminated candidiasis, or to generate an immune response that blocks adherence of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to a monoclonal antibody against an agglutinin-like sequence (ALS)1 protein that specifically binds an appirope in an N-terminal domain and which inhibits adherence of Candida albicans to endothelial cells. The invention is useful as vaccines for treating and preventing disseminated candidiasis and for generating an immune response capable of blocking adherence of the organism. The invention is also useful in gene therapy. The present sequence is Candida albicans agglutinin-like sequence (ALS) protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        68
                                                                                                                                                                                                                                                                                                             The present invention relates to a monoclonal antibody against an agglutinin-like sequence (ALS)1 protein that specifically binds an epitope in an N-terminal domain and which inhibits adherence of Candida albicans to endothelial cells. The invention is useful as vaccines for treating and preventing disseminated candidiasis and for generating an immune response capable of blocking adherence of the organism. The invention is also useful in gene therapy. The present sequence is Candidabicans agglutinin-like sequence (ALS) protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New monoclonal antibody against Candida albicans agglutinin-like sequence 1 adhesin proteins, for use as a vaccine to treat or prevent disseminated candidiasis, or to generate an immune response that blocks adherence of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Candida
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to a monoclonal antibody against an agglutinin-like sequence (ALS)1 protein that specifically binds an epplitope in an N-terminal domain and which inhibits adherence of Candida albicans to endothelial cells. The invention is useful as vaccines for treating and preventing disseminated candidiaals and for generating an immune response capable of blocking adherence of the organism. The invention is also useful in gene therapy. The present sequence is Candidalbicans agglutinin-like sequence (ALS) protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to a monoclonal antibody against an agglutinin-like sequence (ALS)1 protein that specifically binds an espitope in an N-terminal domain and which inhibits adherence of Candida albicans to endothelial cells. The invention is useful as vaccines for treating and preventing disseminated candidiasis and for generating an immune response capable of blocking adherence of the organism. The invention is also useful in gene therapy. The present sequence is Candid albicans agglutinin-like sequence (ALS) protein
                                                                            :| :| | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | : | | : | : | | : | : | | : | : | | : | : | | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | :

epitope in an N-terminal domain and which inhibits adherence of Candida albicans to endothelial cells. The invention is useful as vaccines for treating and preventing disseminated candidiasis and for generating an immune response capable of blocking adherence of the organism. The invention is also useful in gene therapy. The present sequence is Candida albicans agglutinin-like sequence (ALS) protein
                                                                                                                                                                                                                    120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   420
                                                                                                                                                                                                                                Candida
                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                           The present invention relates to a monoclonal antibody against an agglutinin-like sequence (ALS)1 protein that specifically binds an epitope in an N-terminal domain and which inhibits adherence of Candida albicans to endothelial cells. The invention is useful as vaccines for treating and preventing disseminated candidiasis and for generating an immune response capable of blocking adherence of the organism. The invention is also useful in gene therapy. The present sequence is Candidalbicans agglutinin-like sequence (ALS) protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             :

                                                                                                                                                                                                                                                                                                                                The present invention relates to a monoclonal antibody against an agglutinin-like sequence (ALS) 1 protein that specifically binds an expitope in an N-terminal domain and which inhibits adherence of Candida albicans to endothelial cells. The invention is useful as vaccines for treating and preventing disseminated candidiasis and for generating an immune response capable of blocking adherence of the organism. The invention is also useful in gene therapy. The present sequence is Candida albicans agglutinin-like sequence (ALS) protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120

```
This invention relates to a novel method of determining if a molecule affects the function or activity of a glucan synthase pathway in a Saccharomyces cerevisiae cell which comprises determining if the RNA expression or protein expression in the cell of at least one target polymucleotide sequence is changed relative to the expression of said target polymucleotide sequence in the absence of the molecule. The target polymucleotide sequence is selected from the group consisting of YOLI 13W (SKMI), YNR066C, YLR121C (YPS3), YRR209W, YKL161C, YFR030W (FLO1) and YFR030W (METLO). The method is useful for determining whether a molecule affects the function or activity of a glucan synthase pathway in an S cerevisiae cell, possibly allowing development of antifungal agents for use against a variety of pathogens. The present sequence is that of the protein encoded by an S cerevisiae gene which may be used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        84;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           238

DITISOPIGDNGDNTSSTN--PVPTVATSTLASASEEDNKSGSHESASTSLKPSMGENSG 1089 New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties. The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polymucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant having an improved property comprises transformed plant with the Recombinant DNA construct; transformed plant; improved plant property; cold tolerance; heat tolerance; drought tolerance; herbicide; osmosis; pathogen tolerance; plant disease resistance; cell cycle pathway modification; plant growth regulator; homologous recombination; seed oil yield; protein yield; carbohydrate; nitrogen; phosphorus; photosynthesis; lignin; galactomannan; LITSTEIEATITSPIEAPSPAVSSGIDVITEPIDIREQPITLSIT-----SKINSELV -----QATNENGGKSPSTDLTSSLTTGT-SASTSANSELVTSGSV -VASASNDQSHSTSV----TNSNSIVSNTPQTTLSQQ 1221 VTSSSP----STNTFIASTYDGSGSIIQHSTWLYGLITLLSLFI 1260 BS; Goldman 1032

crecombinant DNA construct and growing the transformed plant, where the polynucleotide or polypeptide is useful for improving plants with mere recombinant DNA construct is useful for producing plants with construct is useful for producing plants with mereved plant properties, e.g. improved cold, heat or drought tolerance, tolerance to herbicides, extreme osmotic conditions, pathogens or pests, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of homologous recombination, modified seed oil or protein yield and/or content, improved yield by modification of carbohydrate, nitrogen or providing improved plant growth and development under at least one stress condition, improved lignin production or improved galactomannan production. This sequence represents a bacterial polypeptide used in the grope of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at sequence. html.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       85
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The agglutination gene is called FLO1. Saccharomyces cerevisiae includes an agglutination gene of 4.7 kb (FLO15) and an agglutination gene of 2.6 kb (FLO15). FLO1L is the intact FLO1 gene on chromosome I, and FLO1S is the FLO1L gene with a portion of the ORP deleted in frame. FLO1L imparts a relatively strong agglutinative property to the host yeast into which it is introduced, while FLO1S imparts a weaker agglutinative property. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant to such as maize or soybean. The method of producing a transformed plant comparison improved property comprises transforming a plant with the recombinant DNA construct and growing the transformed plant where the polynucleotide or polypeptide is useful for improving plant properties. The recombinant DNA construct is useful for improving plant properties. The recombinant DNA construct is useful for producing plants with improved plant properties, e.g. improved cold, heat or drought tolerance. The recombination construct disease, better growth rate by modification of increased rate of plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of content, improved yield by modification of photosynthesis or by providing improved plant growth and development under at least one stress condition, improved lighin production or improved galactomannan or production. The sequence repersents a bacterial polypeptide used in the stone of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 scope of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic

(I) have cytostatic activity. (I) and (II) can be used in gene therapy and vaccine production. (I) and (II) may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate colon tumour associated protein (TCAP)

expression, such as colonic cancer. For example, (I) and (II) may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of TCAPs by expressing inactive proteins or to supplement the patients own production of them. Additionally, (II) may be used to produce the TCAP proteins, by inserting the nucleic acids into a host cell culturing the cell to express the protein. (II) and its complementary sequences may also be used as DNA probes in diagnostic polymerase chain reaction (PCR) and phyridisation assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. (I) may also be used as antigens in the production of antibodies against TCAPs and in assays to identify modulators of TCAP expression and activity. Anti-(I) antibodies and antagonists may also be used as diagnostic agents for detecting the antibodies may also be used as diagnostic agents for detecting the antibodies may also be used as diagnostic agents for detecting the custom confirmation and activity. The anti-(I) antibodies may also be used as diagnostic agents for detecting the antibodies may also be used as diagnostic agents for detecting the custom confirmation and antipodies may also be used as diagnostic agents for detecting the nucleotide and amino acid sequences given in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2272

                                                                                                                                                                            The present invention describes compounds (1) for the immunotherapy and diagnosis of colon cancer. Also described: (1) a method for detecting the presence of cancer in a patient; (2) a method for stimulating and/or sexpanding T cells specific for a tumour protein; (3) an isolated T cell population comprising T cells prepared by the method of (2); (4) a method for stimulating an immune response in a patient; (5) a method for treating cancer in a patient; and (6) a method for inhibiting the development of cancer in a patient. (1) have immunostimulant and cytostatic activities and can be used in vaccines. AB232646 to AB233725 and ABB55343 to ABP55391 represent human colon cancer/tumour related sequences used in the exemplification of the present invention

KESULI I US-09-248-796A-16243	
Sequence 16243, Application US/09248796A	
Patent No. 6747137	
GENERAL INFORMATION:	
APPLICANT: KOLIN WEINBLOCK EG AL memer en entermeten: werde bet hett hett hatt hatt hett geoffende betating to Cannid	TUNA.
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS	
FILE REFERENCE: 107196.132	
CURRENT APPLICATION NUMBER: US/09/248,796A	
CURRENT FILING DATE: 1999-02-12	
PRIOR APPLICATION NUMBER: US 60/074,725	
PRIOR FILING DATE: 1998-02-13	
PRIOR APPLICATION NUMBER: US 60/096,409	
PRIOR FILING DATE: 1998-08-13	
NUMBER OF SEQ ID NOS: 28208	
SEQ ID NO 16243	
LENGTH: 1191	
TYPE: PRT	
ORGANISM: Candida albicans	
US-09-248-796A-16243	
Query Match 64.5%; Score 4190.5; DB 4; Length 1191;	
Similarity 68.1%; Pred. No. 1.2e-230;	1

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICT
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: POR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: 107196.132
CURRENT APPLICATION NUMBER: US 60/074,725
PRIOR PELING DATE: 1998-02-13
PRIOR FILING DATE: 1998-02-13
PRIOR FILING DATE: 1998-08-13
NUMBER OF SEQ ID NOS: 28208
SEQ ID NO 16701
LENGTH: 646
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               7
                                                                                                                            480

US-09-248-796A-16244, Application US/09248796A

Sequence 16244, Application US/09248796A

Patent No. 6747137

GENERAL INFORMATION:

APPLICANT: Keith Weinstock et al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICAN

TITLE OF INVENTION: POR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: 107196-112

CURRENT APPLICATION NUMBER: US 60/074,725

PRIOR APPLICATION NUMBER: US 60/096,409

PRIOR PILING DATE: 1998-02-13

PRIOR APPLICATION NUMBER: US 60/096,409

PRIOR PILING DATE: 1998-08-13

NUMBER OF SEQ ID NOS: 28208
                266
                                                                                                                                                                                                                                                     425
                                                                                                                                                                                                                                                                                446

Sequence 14114, Application US/09248796A

Sequence 14114, Application US/09248796A

Patent No. 6/47137

APPLICANT: Keith Weinstock et al

TITLE OF INVENTION: NUCLBIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBIC

TITLE OF INVENTION: NUCLBIC ACID AND THERAPEUTICS

TITLE OF INVENTION: VUMBER: US/09/248,796A

CURRENT APPLICATION NUMBER: US 60/074,725

PRIOR FILING DATE: 1998-02-13

PRIOR FILING DATE: 1998-02-13

PRIOR FILING DATE: 1998-08-13

NUMBER OF SEQ ID NOS: 28208

SEQ ID NO 14114

LENGTH: 426
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ñ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           416
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         476
